Tarnished. "I can't help but feel that this game is something that would be a home run in the video game industry. If they just made this to a high-quality console game and marketed it to the casual audience, this game would of been a hit. The graphics are fantastic. The voice acting is above average. The music is amazing. The gameplay systems are great. The story is well done, and the online is good. I liked this game a lot. The only downfall is the low difficulty. However, it can be turned up. I couldn't recommend this game to everyone, but it is a gem for anyone looking for a good, fun game with a strong story and characters." -by Stephen_Mooney Emerald Dawn. "Emerald Dawn is a nice little RPG that has some very nice graphics. It's hard to say whether it can be enjoyed by the casual player or not, though I'd say it's safe to say that for the average gamer who doesn't want to really invest time into learning the game, it's a fine choice. It can also be enjoyed by a player who prefers RPG's with a much more combat focused gameplay system, as there's a decent fighting element in the game. It's an extremely easy to learn game, and to play it becomes even easier. The story is a little raunchy, but it's very dark and deals with some very serious subjects. If you love JRPG's, this is an excellent choice, and will go down much smoother than the average game. The graphics are good, and for me at least, they were a big selling point for this game. My only complaint is the music, and even that is probably just me being a big movie person, but it can get a little annoying at times. However, some of the music is nice and fits the mood of the game's settings and locations. The game is quite easy. You gain experience fairly quickly, and gain several levels in a very short period of time, making the gameplay progression rather smooth. The only area where this game differs from other typical JRPG's is the decision system. For many JRPG's, in order to progress through bff6bb2d33

DorkForg7 2018-03-22 07:31:32 If you have Yallubots which your friends don't, you can play it with them! But honestly, i've never played it so i don't know how well it is. It just seems pretty awesome! I also think on some level it could be kind of fun if you want it to be, but so do the games that are just way less fun. FRANK 2018-03-25 19:58:13 That makes me wanna get it, but I don't think I can. DorkForg7 2018-03-27 07:10:37 You should really try it! Online is really fun and the story is interesting and entertaining as well.Q: How to create a wxTreeItemColumn like a radio button I would like to add a button column to a wxTreeCtrl. I would like the button column to look like a radio button (one button per node), so if the user selects the node, the next time they visit the page, the button stays "checked". How do I create the button column as a radio button? A: Make it invisible and control the value through the data object for the button. It is still a normal wxTreeItemColumn, so you can use the item data function to get the value of the item that is relevant. Q: RewriteRule not working for url with parameters I have the following in my.htaccess file: RewriteEngine On RewriteCond %{REQUEST_FILENAME}!-f RewriteCond %{REQUEST_FILENAME}!-d RewriteRule ^(.)$ index.php?route=$1 [QSA,L] This basically takes myurl.com/ and turns it into myurl.com/index.php?route=myurl My.htaccess works fine when I only have /index.php in my rewrite rule, but I need the rewrite rule to handle when the url has a /?name=value as well, so it's myurl.com/?name=value. A: Something like this should work: RewriteEngine On RewriteCond %{REQUEST_FILENAME}!-*

Q: Any suggestions on the best way to write this inside a DockPanel or some other container Here's a simplified version of what I'm doing that should be fairly easy to see what I want to do. Assumptions: This needs to be a single image There will be two clicks to flip the image One flip is gonna be completely transparent, that is, no double-clicking Expected Behavior: A user will click "Flip" and a flip will occur The entire flip will be transparent: no evidence of the click will remain on the screen Given the requirements I'm thinking first that the best way to do this is to cut out the image and place it in an Ellipse, which is then moved by an event handler. That will work great most of the time, but here are the two problems: Even though I want the entire image to be transparent, I can't figure out how I'd need to deal with the Ellipse's borders and the image that sits in it when I "flip" it. (On a disk it's a crescent) Even if I make a transparent version of the image (i.e. copy the image, cut out the Ellipse, and paste it into a transparent container) that image can have any effect of the image (crowning effect, dirt, etc) on it I'm on.NET 2.0, so that means Ellipse is not an option Is there any chance this can be accomplished using only in-browser interactions? (A carousel seems like the perfect approach to this but all the examples I've seen are for pre-CSS3, pre-Javascript coding) A: There are two "flips" here
