The study of the content and the biological activities of phenolics from plant extracts that contain capsaicinoids has been stimulated by the interest in the identification of substances that can be used to treat diseases of an inflammatory nature. In this study, several analytical and physicochemical methods have been applied to evaluate the effect of hot peppers on human health. In particular, four commercially available extracts from wild-

growing hot peppers were analyzed by the application of HPLC-DAD and LC-MS/MS and for their antioxidant
